ENGLISH FOR TECHNICAL COMMUNICATION

(Common to all Branches)

Course Objectives:

1.	Enable students identify the context and thematic information from social, academic, and workplace dialogues and texts.
2.	Develop students' ability to use appropriate grammatical structures and vocabulary.
3.	Equip students with contextual vocabulary for writing.
4.	Familiarize students with reading strategies to comprehend and interpret texts.
5.	Develop students' ability to demonstrate appropriate social media etiquette.

Course Outcomes

Sl. No	Outcome	Knowledge Level
1.	Identify the thematic information from transactional dialogues and texts to construct coherent written and spoken discourses.	K2
2.	Apply appropriate grammatical structures and vocabulary to summarize texts on the related themes.	K3
3.	Apply contextual vocabulary to paraphrase texts and write letters.	K3
4.	Develop reading strategies to comprehend and interpret various texts for a global understanding.	K3
5.	Construct book/film reviews and demonstrate appropriate social media etiquette in writing, employing sentence synthesis techniques.	K3

SYLLABUS

UNIT-I (10Hrs)	**Effective Communication: Exploring Channels and Methods** **Vocabulary:** Roots, Prefixes, and Suffixes; Homonyms **Grammar:** Articles, Prepositions, Tenses. **Listening:** Listening for main ideas and supporting details, Note-taking **Speaking:** Introducing self and others, Describing people and objects, JAM **Reading:** Definition and Importance, Skills and Sub-Skills of Reading **Writing:** Cohesion and Coherence, Paragraph Writing
UNIT-II (10 Hrs)	**Eco-Consciousness: Negotiating for a Sustainable Future** **Vocabulary:** Contractions, Phrasal Verbs, Idioms & Phrases **Grammar:** Subject-Verb Agreement, Conditional Sentences **Listening:** Listening to various texts and comprehension **Speaking:** Role-plays, Extempore **Reading:** Reading for Inference, Point of View, Tone and Perspective

	Writing: Note-making, Summarizing, Paraphrasing (at basic level)
UNIT-III (10 Hrs)	**Disruptive Technologies: Ethical Implications and Future Prospects** **Vocabulary:** One-Word Substitutes, Commonly Confused Words **Grammar:** Degrees of Comparison, Active and Passive Voice, Question Tags **Listening:** Listening to stories, news, documentaries, and discussions **Speaking:** Debate, Group Discussions **Reading:** Reading the extracts/articles/ essays of the newspapers, journals, and literary texts. **Writing:** Paraphrasing (at advanced level), Letter Writing
UNIT-IV (10 Hrs)	**Entrepreneurship and Start-Up Culture: Emerging Trends** **Vocabulary:** Business/ Profession/ Career/ Job-related Vocabulary **Grammar:** Sentence Synthesis, Simple, Compound and Complex Sentences **Listening:** Listening to debates and discussions **Speaking:** PowerPoint Presentations by Individuals and Teams **Reading:** Reading general texts for global understanding **Writing:** Email Writing, Data Interpretation, Report Writing
UNIT-V (10 Hrs)	**Ethical Leadership: Integrating Social Responsibility and Core Values** **Vocabulary:** Advanced Vocabulary for GRE/TOEFL/ IELTS/CAT **Grammar:** Sentence Synthesis, Para Jumbles **Listening:** Listening to talks/speeches by eminent personalities **Speaking:** Team Discussions and Presentations **Reading:** Reading specific texts for global comprehension **Writing:** Book/Film Reviews, Social Media Etiquette

LINEAR ALGEBRA & CALCULUS

(Common to All Branches of Engineering)

Course Objectives: Students are expected to learn

1.	Concepts of linear algebra and methods of solution of linear simultaneous algebraicequations.
2.	Eigen values, Eigen vectors and quadratic forms.
3.	Problems and applications of Mean value theorems
4.	Application of partial differentiation for determining maxima/ minima of functions.
5.	Concepts of double, triple integrals and its applications.

Course Outcomes: After completion of the course, the student will be able to

S.No	Outcome	Knowledge Level
1.	**Solve** a system of linear equations by using direct and indirect methods.	K3
2.	**Determine** Eigen values and Eigen vectors, execute matrix Diagonalization and reduce Q.F.'s to canonical forms.	K3
3.	**Apply** mean value theorems to analyze function behaviour and solve real life problems.	K3
4.	**Apply** the concepts of partial differentiation in various engineering applications.	K3
5.	**Apply** the concepts of multiple integrals to calculate areas, volumes of geometrical regions and in engineering applications.	K3

SYLLABUS

UNIT-I (10Hrs)	**Linear System of Equations:** Rank of a matrix by echelon form, normal form. Inverse of a matrix by Gauss-Jordan method. Consistency of linear equations: Homogeneous and Non-Homogeneous systems. Gauss elimination method, Jacobi and Gauss Seidel Iteration Methods.
UNIT-II (10 Hrs)	**Eigen Values, Eigen Vectors and Quadratic Forms:** Eigen values and Eigen vectors of a matrix, their properties, Cayley-Hamilton Theorem (without proof), Inverse and powers of a matrix by Cayley – Hamilton theorem, Diagonalization of a matrix, Quadratic forms and Nature of the Quadratic Forms, Reduction of a Quadratic form to canonical form by Orthogonal Transformation and Singular Value Decomposition.
UNIT-III (10 Hrs)	**Single Variable Calculus:** Mean Value Theorems: Rolle's Theorem, Lagrange's mean value theorem, Geometrical interpretation of these theorems, Cauchy's mean value theorem, Taylor's and Maclaurin's theorems (without proof) with Lagrange's form of remainder, Taylor's and Maclaurin series.

UNIT-IV (10 Hrs)	**Partial differentiation and Applications:** Functions of several variables, Continuity and Differentiability, Partial derivatives, Euler's theorem, Total derivative, chain rule, Taylor's and Maclaurin's series expansion of function of two variables, Jacobians, Functional dependence, Maxima and Minima of function of two variables without constraints and with constraints - Method of Lagrange multipliers.
UNIT-V (10 Hrs)	**Multiple Integrals:** Double integrals, change of order of integration, triple integrals, change of variables from Cartesian to polar, cylindrical and spherical coordinates. Finding areas (by double integrals) and volumes (by double integrals and triple integrals).

PHYSICS FOR CIVIL ENGINEERS

(For Civil)

Course Objectives:

1.	To provide students with a strong foundation in wave optics concepts such as interference, diffraction and Polarization along with their application in optical measurements.
2.	To introduce the fundamentals of crystallography and material characterizations for engineering applications.
3.	To familiarize the students with acoustics of buildings and basics of ultrasonics for civil engineering applications.
4.	To enlighten the students with sensor technologies, optical fibers and NDT methods for structural health monitoring of civil engineering designs.
5.	To equip the students with the concept of Nanomaterials, and Carbon Nano tubes, with their significance and applications.

Course Outcomes: At the end of the course, the student will be able to:

S.No.	Outcome	Knowledge Level
1.	Apply the optical techniques of Interference, Diffraction and Polarization in Engineering Applications.	K3
2.	Analyze the crystal structure using X-Ray diffraction methods and characterize the different materials by various techniques.	K4
3.	Analyze the acoustics of buildings and ultrasonic methods for developing and testing earth quake resistant smart structures.	K4
4.	Apply the sensor technology, optical fibers and non-destructive testing methods for structural health monitoring of civil engineering designs.	K3
5.	Interpret the features of Nanomaterials and CNTs, their preparation and characterization for developing smart materials for Engineering applications.	K3

SYLLABUS

UNIT-I (10Hrs)	**APPLIED WAVE OPTICS** **Interference:** Superposition Principle, Coherence, Types of Interference, Thin-film interference (reflection geometry), Newton's rings, Determination of wavelength and refractive index. **Diffraction:** Fresnel and Fraunhofer diffraction, Fraunhofer's diffraction due to single slit (quantitative), double slit & N-slits (qualitative), Diffraction Grating and grating spectrum. **Polarization:** Types of polarization, Nicol's prism, Half-wave and Quarter-wave plates.
UNIT-II (10 Hrs)	**CRYSTALLOGRAPHY AND MATERIAL CHARACTERIZATION** **Crystallography:** Introduction to crystalline and amorphous materials, Space lattice, Basis,

	Unit cell, Lattice parameters, Crystal systems and Bravais lattices, Coordination number and packing fraction of SC, BCC and FCC structures. **Material Characterization:** Crystal planes and Miller indices, inter-planar spacing and its significance, Bragg's law and X-ray diffraction (XRD),fundamentals of Electron microscopy, principle and mechanism of Scanning Electron Microscopy (SEM), Basic principle of EDS for elemental identification.
UNIT-III (10 Hrs)	**ACOUSTICS OF BUILDINGS AND ULTRASONICS** **Acoustics of Buildings:** Introduction, Reverberation and reverberation time, Sabine's formula Requirements of an acoustically good building/auditorium, Sound absorption and insulation, Basic acoustic defects, Noise control and remedial measures. **Ultrasonics:** Introduction to ultrasonic waves, Characteristics and properties of ultrasonic s Generation and detection methods of ultrasonic, applications of ultrasonics.
UNIT-IV (9 Hrs)	**SENSORS, OPTICAL FIBERS AND NON-DESTRUCTIVE TESTING** **Sensors and Optical fibers:** Introduction to sensors, types of sensors (Humidity sensor, Pressure sensor, Piezoelectric sensor) and their applications in structural health monitoring, Strain gauges. Introduction to optical fibers and their working principle, types of optical fibers and their applications. **Non-Destructive Testing (NDT):** Introduction to non-destructive testing, Need and advantages of NDT, Principles of ultrasonic testing, Pulse-echo and transmission methods (qualitative)
UNIT-V (9 Hrs)	**NANOMATERIALS & CHARACTERIZATION TECHNIQUES** **Nanomaterials:** Introduction and salient features of Nanomaterials, Synthesis methods Ball milling, Condensation, Chemical Vapour Deposition and Sol –Gel method, applications of Nano materials. **Characterization Techniques:** The Scanning Tunneling Microscopy (STM) and the Atomic Force Microscopy (AFM), Carbon nanotube s (CNTS) structure, types, and their properties and applications.

SUSTAINABLE DEVELOPMENT: PRINCIPLES, PRACTICES AND SDGS

(For CE)

Course Objectives: The course aims to:

1.	Introduce students to the concept, principles, dimensions, and evolution of sustainable development.
2.	Familiarize students with the **17 Sustainable Development Goals (SDGs)** and their targets and indicators.
3.	Develop an understanding of the interrelationships among environmental, social, economic, and institutional dimensions of sustainability.
4.	Enable students to analyze contemporary sustainability challenges at local, national, and global levels.
5.	Develop students' ability to apply sustainability principles and propose practical solutions aligned with the SDGs, including those relevant to the built environment.
6.	Promote responsible citizenship, ethical decision-making, and participation in sustainable development initiatives.

Course Outcomes: After successful completion of the course, students will be able to:

S.No	Outcome	Knowledge Level
1.	**Explain** the concept, principles and evolution of sustainable development, including intergenerational equity, the transition from the MDGs to Agenda 2030 and the role of civil engineers in sustainability.	K2
2.	**Describe** the structure of the SDG framework (goals, targets and indicators) and illustrate the interlinkages among the 17 SDGs with everyday and engineering examples.	K2
3.	**Apply** sustainability principles to suggest practical solutions for environmental challenges such as climate change, water scarcity, energy use and waste, with emphasis on the built environment.	K3
4.	**Explain** the social and economic dimensions of sustainability and relate them to inclusive development, infrastructure and responsible lifestyles.	K2
5.	**Examine** a local sustainability issue in the context of India's SDG policies and initiatives, and prepare a simple SDG-based action plan for a campus or community.	K3

SYLLABUS

UNIT-I (10Hrs)	**Introduction to Sustainable Development** Meaning, definition, and evolution of sustainable development; Sustainability: environmental, social, and economic dimensions; Need and significance of sustainable development; Sustainable development and quality of life; Brundtland Commission and the

	concept of intergenerational equity; Evolution from Millennium Development Goals (MDGs) to Sustainable Development Goals (SDGs); Agenda 2030 for Sustainable Development; Principles of sustainable development; Global, national, and local perspectives on sustainability; Role of individuals, communities, governments, institutions, and industries. Civil engineering and sustainability: role of civil engineers, environmental impacts of construction, cement and other building materials (awareness level).
UNIT-II (10 Hrs)	**The SDG Framework: Goals, Targets and Indicators** Structure of Agenda 2030 and the 5 Ps (People, Planet, Prosperity, Peace and Partnership); Goals, targets and indicators; Overview and structure of the 17 SDGs; Interlinkages and indivisibility of the SDGs; Synergies and trade-offs among the SDGs; Measurement of progress: SDG targets and indicators, global SDG indicator framework and NITI Aayog SDG India Index; Mapping of everyday and engineering activities to the SDGs
UNIT-III (10 Hrs)	**Environmental Sustainability and Climate Action** Ecosystems, biodiversity and conservation of natural resources: an overview (with local examples); Natural resources and sustainable resource management; Climate change: causes, impacts, mitigation, and adaptation; Greenhouse gas emissions from the built environment and the concept of carbon footprint; Water security and sustainable water management: rainwater harvesting, water conservation and reuse; Energy sustainability and renewable energy; Energy efficiency in buildings; Waste management and circular economy: construction and demolition waste, industrial by-products such as fly ash and slag as resources; Sustainable production and consumption; Sustainable transportation and green infrastructure; Introduction to green buildings; SDGs 6, 7, 12, 13, 14, and 15; Local environmental challenges and sustainable solutions.
UNIT-IV (10 Hrs)	**Social and Economic Dimensions of Sustainability** Poverty, hunger, and food security; Health, sanitation, and well-being: role of safe drinking water and sanitation facilities; Education and lifelong learning; Gender equality and social inclusion; Human rights and sustainable development; Decent work, employment, and inclusive economic growth; Inequality and social justice; Sustainable business and corporate social responsibility; Ethical consumption and responsible lifestyles (Mission LiFE); Sustainable cities and communities: affordable housing, urban services and accessibility; Infrastructure and inclusive development: rural connectivity and access to basic services (awareness level); Role of technology and innovation in sustainable development; SDGs 1, 2, 3, 4, 5, 8, 9, 10, and 11
UNIT-V (10 Hrs)	**SDG Implementation, Governance and Local Action** SDG implementation at global, national, state, and local levels; Role of government and public policy; Institutions, governance, transparency, and accountability; Partnerships for sustainable development; Role of NGOs, educational institutions, industries, and communities; Sustainable development in India: policies and initiatives - National Action Plan on Climate Change, India's climate commitments (NDCs and net-zero target), Swachh

	Bharat Mission, Jal Jeevan Mission, AMRUT and Smart Cities Mission; Localization of SDGs: role of states, urban local bodies and Panchayats; SDGs and higher education institutions; Student participation and community engagement; Designing SDG-based projects and action plans at campus or village level; Case studies and best practices in sustainable development; Future challenges and opportunities for achieving Agenda 2030; SDGs 16 and 17.
Textbooks:

e-Resources	
1.	https://sdgs.un.org/goals
2.	https://unstats.un.org/sdgs/
Suggested Learning Activities:	
1.	Case study on local sustainability challenges; discussion on intergenerational equity; analysis of MDGs and SDGs.
2.	SDG mapping exercise; group presentations; SDG wheel/poster preparation.
3.	Waste audit; water-use assessment; carbon-footprint exercise; case study on renewable energy or biodiversity conservation.
4.	Case study on social entrepreneurship; analysis of inequality indicators; sustainable business model exercise.
5.	Preparation of a local SDG action plan; community-based project; SDG-based institutional audit; presentation of sustainability solutions.
Suggested SDG-Based Student Projects	
1.	Household or campus waste-management audit
2.	Water conservation and consumption assessment
3.	Campus energy-efficiency study
4.	Plastic-free campus/community campaign
5.	Local biodiversity documentation

6.	Sustainable transportation survey
7.	Food waste assessment
8.	SDG awareness survey among students/community
9.	Gender equality or social inclusion study
10.	Development of a local SDG action plan

Course Code	Category	L	T	P	C	C.I.E.	S.E.E.	Exam

DESIGN THINKING AND INNOVATION

(Common to AIML, CIC, CIVIL, CSE, CSBS, ECE, EEE, MECH)

Course Objectives: At the end of the course, the teacher should be able to:

1	Introduce students to the principles, mindset and methodologies of **Design Thinking and human-centered problem solving**.
2	Develop students' ability to **observe, empathize, analyze user needs and formulate well-defined engineering and societal problems**.
3	Develop students' **creative and innovative thinking abilities** through systematic ideation, concept generation and evaluation techniques.
4	Enable students to **develop, prototype, test and iteratively improve solutions** using user feedback and appropriate physical/digital tools.
5	Develop students' ability to identify innovation opportunities, create value propositions, understand basic IPR and communicate innovative solutions effectively.

Course Outcomes: After successful completion of the course, student will be able to

S.No	Outcome	Knowledge Level
1	Explain the principles, processes and mindset of Design Thinking for engineering problem-solving and innovation	K2
2	Apply empathy, observation and problem-framing techniques to identify user needs and define engineering problems	K3
3	Apply creative and systematic ideation techniques to generate and select innovative solution concepts	K3
4	Analyze solution concepts and prototypes using user feedback and appropriate design criteria for iterative improvement	K4
5	Analyze the innovation potential of solutions considering value proposition, feasibility, sustainability, societal impact and basic IPR aspects	K4

SYLLABUS

1	**UNIT I — Design Thinking Foundations & Empathy** Introduction to Design Thinking ; Design thinking mindset and principles ; Design thinking vs. conventional engineering problem-solving ; Human-centered design ; Five-stage design thinking process ; Creativity, curiosity and observation ; Understanding users and stakeholders ; Empathy and user research ; Interviews, observation and contextual inquiry ; Empathy mapping ; Personas and user journeys ; Identifying explicit and latent/unarticulated needs ; Ethical considerations in user research **Practical Activities** • Observation of a real-life problem

	• Conducting user interviews • Preparing an empathy map • Developing a persona • Preparing a user journey map **Unit Outcome** Students will be able to **understand users, identify their needs and translate observations into meaningful design opportunities**
2	**UNIT II — Problem Definition, Analysis & Opportunity Identification** From observations to insights ; Data synthesis and affinity mapping ; Identifying patterns and pain points ; Problem statements ; Point-of-View (POV) statements ; "How Might We" (HMW) questions ; Stakeholder mapping ; 5 Whys and root-cause analysis ; Problem prioritization ; Need–Opportunity mapping ; Problem validation ; Design constraints and specifications ; Social, environmental and sustainability considerations ; Identifying opportunities for innovation **Practical Activities** • Affinity mapping of interview data • Develop three alternative problem statements • Prepare POV and HMW statements • Stakeholder map • Root-cause analysis • Select and validate one problem/opportunity **Unit Outcome** Students will be able to **analyze user research, identify root causes, frame well-defined problems and recognize opportunities for innovative solutions**.
3	**UNIT III — Creativity, Ideation & Concept Development** Creativity and innovation mindset; Divergent and convergent thinking ; Brainstorming and brainwriting ; SCAMPER ; Mind mapping ; Reverse brainstorming ; Analogical thinking ; Biomimicry ; Lateral thinking ; Forced connections ; Morphological analysis ; TRIZ — basic principles ; Individual and collaborative ideation ; AI-assisted ideation: opportunities and limitations ; Idea clustering and screening ; Impact–feasibility matrix ; Concept selection ; Design criteria and decision matrix **Practical Activities** • Generate 20–30 ideas for a selected problem • SCAMPER exercise • Brainwriting exercise • Biomimicry-based ideation • AI-assisted idea generation and critical evaluation • Prepare an idea-selection matrix • Select the top 2–3 concepts **Unit Outcome** Students will be able to **generate diverse solution concepts using creative techniques and systematically select promising ideas based on defined criteria**.

4	**UNIT IV — Prototyping, Experimentation & Validation** Concept development ; Prototype mindset ; Types of prototypes: Paper prototype, Physical prototype, Digital prototype, Storyboard, Role-play, Service prototype ; Low-fidelity and high-fidelity prototypes ; Rapid prototyping ; "Fail fast, learn fast" ; Minimum Viable Prototype (MVP) ; Design experimentation ; Prototype evaluation ; User testing ; Think-aloud method ; Feedback collection ; Usability and functionality testing; Iterative design ; Design critique ; Documentation of iterations ; Use of CAD, simulation and AI-assisted visualization tools **Practical Activities** • Develop a low-fidelity prototype • Prepare a storyboard • Build a physical/digital prototype • Conduct user testing • Collect structured feedback • Modify the prototype • Prepare an iteration log
5	**UNIT V — Innovation, Value Creation & Communication** **Innovation: meaning, characteristics and importance:** Invention vs. innovation ; Incremental, disruptive and radical innovation ; Product, process, service and social innovation ; Technology-driven vs. need-driven innovation ; Sustainable and frugal innovation ; Innovation opportunities and emerging technologies ; From prototype to innovation ; Desirability, feasibility and viability ; Value Proposition ; Value Proposition Canvas ; Introduction to Business Model Canvas ; Customer segments and stakeholder value; Innovation validation; Market/user validation ; Intellectual Property Rights — introduction; Patents, copyright, trademarks and design protection ; Responsible innovation ; Inclusive and sustainable innovation ; Innovation ecosystem and entrepreneurship ; Communicating innovative ideas ; Innovation pitch **Practical Activities** 1. Classify existing products/services as incremental, disruptive or radical innovations. 2. Identify three innovation opportunities from a campus/community problem. 3. Prepare a **Value Proposition Canvas**. 4. Validate the proposed innovation with potential users. 5. Prepare an introductory **Business Model Canvas**. 6. Identify possible IPR protection. Prepare and deliver a **3-minute Innovation Pitch**

AI Tools & Applications

(Common to AIDS, CIVIL, CSBS, CSD, CSIT, EEE, IT, MECH)

Course Objectives: To familiarize students with the landscape of AI tools and their underlying working principles.

1	To develop competence in prompt engineering for effective interaction with generative AI systems
2	To enable students to apply AI tools for data analysis, visualization, and interpretation.
3	To train students in using AI-assisted tools for coding, writing, and productivity tasks.
4	To instill awareness of ethical, legal, and societal considerations in AI tool usage.

Course Outcomes:

S. No	Outcome	Knowledge Level
1	Illustrate the categories, capabilities, and limitations of major AI tools (text, image, code, data).	K3
2	Apply the principles of prompt engineering and demonstrate how generative AI models process instructions.	K3
3	Apply AI tools to solve first-year engineering problems in analysis, writing, and coding tasks.	K3
4	Analyze AI-generated outputs for accuracy, bias, and reliability before use.	K4
5	Evaluate the ethical, academic-integrity, and societal implications of AI tool use, justifying appropriate usage choices.	K4

SYLLABUS

1

Introduction to AI and the AI Tools Landscape What is AI, Machine Learning, and Generative AI — basic definitions and how they relate to one another. Core categories of AI tools: conversational/text, code assistants, data-analysis tools, image-generation tools, and writing/productivity tools. How large language models process and generate responses (conceptual, non-mathematical overview). Criteria for selecting the right AI tool for a given task — accuracy needs, cost, data sensitivity, and output format. Setting up accounts and workspaces; understanding free-tier versus paid-tier capabilities and limitations.

Widely Used AI Tools by Application (for classroom coverage):

Category	Example Tools	Typical Application
Conversational/General-Purpose AI	ChatGPT, Claude, Gemini, Perplexity	Writing, research, coding help, file/data analysis, cited web search
AI Coding Assistants	GitHub Copilot, Cursor, Claude Code	In - IDE code completion, AI Native editing, multi-file agentic coding

	Data Analysis Tools	ChatGPT(Advanced Data Analysis), Microsoft Copilotin Excel, Julius AI	Upload a dataset, generate statistics/charts, spreadsheet Formulas via natural language
	Image Generation	Mid journey, DALL·E 3, Stable Diffusion/Flux	Illustrations, concept art, design mockups
	Writing & Productivity	Grammarly, Gamma, Fathom, Notion AI	Grammar/style checking, slide generation, meeting summaries, task automation
	Audio, Video & Presentation (optional)	Eleven Labs, Runway/Sora, Synthesia	Text-to-speech, AI video generation, script-to-video presentations

Teacher Practical Examples (for classroom demonstration):

1. Live comparison of the same general engineering query (e.g., "explain the engineering design process") answered by two different AI chatbots, highlighting differences in response style and accuracy.

2. Walkthrough of an AI tool's interface — settings, conversation history, file upload, and model selection — using a common platform.

Student Exercise Problems (for practice):

1. Create accounts on two AI platforms and compare their responses to a simple engineering question (e.g., "explain the difference between analysis and design").

2. Prepare a one-page comparison chart of five AI tools by category and primary use case.

3. Write a short reflection identifying one task in your daily academic life where an AI tool could help.

2

Prompt Engineering and Generative AI Tools

Anatomy of a good prompt — context, clear instruction, desired format, and constraints.

Zero-shot, few-shot, and chain-of-thought prompting techniques and when to use each.

Role-based and context-setting prompts (e.g., asking the AI to respond as a reviewer, tutor, or domain expert).

Iterative prompt refinement — diagnosing a poor AI response and rewriting the prompt to fix it.

Using generative AI for brainstorming, summarizing, and drafting technical content.

Teacher Practical Examples (for classroom demonstration):

1. Refine a vague prompt (e.g., "explain project scheduling") into a precise one step-by-step, showing output improvement at each stage.

2. Demonstrate few-shot prompting by providing examples to guide the AI toward a specific output format (e.g., a formatted comparison table).

Student Exercise Problems (for practice):

1. Write three versions of a prompt (basic, detailed, role-based) for the same task and compare outputs.

2. Use an AI tool to summarize a one-page technical article and verify the summary against the original.

3. Draft a chain-of-thought prompt to solve a multi-step numerical/logical problem (e.g., a unit-conversion or estimation problem) and check the reasoning.

3	**AI Tools for Data Analysis and Visualization** AI-assisted spreadsheet and dataset analysis using natural-language commands. Natural-language querying of datasets to extract summary statistics and insights. AI tools for generating charts, graphs, and visual summaries from tabular data. Interpreting AI-generated statistical summaries correctly and recognizing their limitations. Identifying and correcting errors or misinterpretations in AI-generated data analysis. **Teacher Practical Examples (for classroom demonstration):** **1.** Upload a small dataset (e.g., class attendance or survey data) to an AI tool and generate a summary-statistics report and chart using natural-language commands. **2.** Show an example where an AI tool misinterprets data (e.g., treats a numeric code as text), and demonstrate how to verify and correct it. **Student Exercise Problems (for practice):** **1.** Use an AI tool to clean and summarize a small sample dataset (e.g., class attendance or marks data). **2.** Generate three different chart types from the same dataset using AI prompts and justify which is most appropriate. **3.** Cross-check one AI-generated statistical claim manually and report any discrepancy found.
4	**AI Tools for Coding, Writing, and Productivity** AI coding assistants — code generation, explanation, and debugging support for simple programs. AI writing assistants for reports, emails, and technical documentation. AI tools for scheduling, note-taking, and meeting/lecture summarization. AI-assisted presentation and slide-outline generation from a topic prompt. Integrating AI tools into an efficient day-to-day academic and engineering workflow. **Teacher Practical Examples (for classroom demonstration):** **1.** Use an AI coding assistant to generate a simple program (e.g., a temperature converter), then intentionally introduce a bug and have the AI debug it. **2.** Generate a presentation outline and speaker notes from a topic prompt using an AI writing/productivity tool. **Student Exercise Problems (for practice):** **1.** Use an AI coding tool to write and debug a simple program for a given problem statement. **2.** Draft a formal email or short report using an AI writing assistant, then manually edit it for accuracy and tone. **3.** Generate a slide outline for a 5-minute seminar topic using an AI tool and refine it.
5	**Ethics, Reliability, and Emerging Trends** Bias and hallucination in AI outputs, and techniques for detecting and fact-checking them. Academic integrity and appropriate citation of AI assistance in coursework and submissions. Data privacy and security considerations, including obligations under India's Digital Personal Data Protection Act, 2023 (DPDP Act), when uploading personal or institutional data. Copyright and intellectual property considerations in AI-generated text and image content. Emerging trends — multimodal AI and AI agents — and their implications for future engineering practice. **Teacher Practical Examples (for classroom demonstration):**

	1. Show a documented case of AI hallucination (a fabricated fact or citation) and demonstrate how to fact-check it. **2.** Walk through an example of properly citing AI assistance in an academic submission per institutional guidelines. **3.** Walk through a worked example of checking whether AI-generated text or image output raises a copyright/IP concern (e.g., close paraphrasing of a source). **Student Exercise Problems (for practice):** **1.** Identify and document a hallucination or bias instance produced by an AI tool on a factual query. **2**. Draft an "AI usage declaration" for a hypothetical assignment, citing tools and extent of use appropriately. **3.** Review the data-handling/privacy policy of one AI tool used in this course and identify one DPDP Act, 2023 compliance consideration relevant to student data.

PHYSICS FOR CIVIL ENGINEERS LAB

(For Civil)

Course Objectives:

1	To impart hands on experience to the students entering Engineering & Technology education about handling equipment/instruments and use them in experimentation.
2	To make the students understand theoretical aspects of various phenomena experimentally.

Course Outcomes:

S.No.	Outcome	Knowledge Level
1	Apply fundamental principles of Physics to conduct engineering laboratory experiments.	K3
2	Get hands on experience in setting up experiments and using the instruments/equipment individually and conduct experiments.	K3
3	Apply graphical and analytical methods to analyze experimental data and determine physical parameters.	K3
4	Get introduced to using new/advanced technologies and understand their significance .	K3

List of Experiments

(Any **10** of the following listed experiments)

(Out of which any **TWO** experiments may be conducted in virtual mode)

1	Determination of thickness of thin object by wedge method.
2	Determination of radius of curvature of a given plano convex lens by forming Newton's rings.
3	Determination of wavelengths of different spectral lines in mercury spectrum using diffraction grating in normal incidence configuration.
4	Determination of resolving power of telescope.
5	Determination of dielectric constant of given capacitor by charging and discharging method.
6	Study the variation of B versus H by magnetizing the magnetic material (B-H curve).
7	Determination of temperature coefficients of a thermistor.
8	Determination of wavelength of Laser and grating element.
9	Estimation of Planck's constant using photoelectric effect.
10	Determination of the Resistivity of semiconductor by four probe method.
11	Determination of the energy gap of a semiconductor using p-n junction diode.
12	Study the variation of magnetic field along the axis of a current carrying circular coil by Stewart & Gee's Method
13	Determination of Hall voltage and Hall coefficient of a given semiconductor using Hall Effect.
14	Determination of Acceleration due to gravity and Radius of gyration using Compound pendulum.

15	Determination of magnetic susceptibility by Kundt's tube method
16	Verification of Brewster's law.
17	Determination of frequency of A.C. supply using Sonometer.
18	Determination of frequency of electrically maintained tuning fork by Melde's apparatus.
19	Determination of Rigidity modulus of material of a wire-dynamic method (Torsional pendulum).

WORKSHOP PRACTICE

(Common for CE & ME)

Course Objectives:

1	Familiarize students with workshop tools, equipment, materials, and safety practices used in basic engineering activities.
2	Develop hands-on skills in wood working, sheet metal working, fitting, foundry, welding, and plumbing operations.
3	Provide practical experience in basic electrical wiring, soldering, and electrical circuit connections.
4	Introduce students to basic tinkering, sensors, actuators, microcontrollers, and IoT applications.
5	Develop students' practical problem-solving, fabrication, assembly, maintenance, and troubleshooting skills through hands-on activities.

Course Outcomes:

S.No	Outcome	Knowledge Level
1	Apply safety practices and identify appropriate workshop tools, equipment, materials, and measuring instruments for basic engineering activities	K3
2	Perform basic fabrication and manufacturing operations using carpentry, sheet metal, fitting, foundry, welding, and plumbing techniques.	K3
3	Apply workshop practices for the assembly, disassembly, maintenance, and repair of simple engineering components and systems.	K3
4	Perform basic electrical wiring, circuit connections, soldering, and testing using appropriate electrical practices.	K3
5	Develop simple sensors, actuator, microcontroller, and IoT-based applications through hands-on tinkering and experimentation.	K5

SYLLABUS

1	Demonstration: Safety practices and precautions to be observed in workshop.
2	Wood Working: Familiarity with different types of wood and tools used in wood working and making following joints. a) Half – Lap joint b) Mortise and Tenon joint c) Corner Dovetail joint or Bridle joint
3	Sheet Metal Working: Familiarity with different types of tools used in sheet metal working, Developments of following sheet metal job from GI sheets. a) Tapered tray b) Conical funnel c) Elbow pipe d) Brazing
4	Fitting: Familiarity with different types of tools used in fitting and do the following fitting exercises. a) V-fit b) Dovetail fit c) Semi-circular fit

5	Electrical Wiring: Familiarity with different types of basic electrical circuits and making the following connections. a) Parallel and series b) Two-way switch c) Godown lighting
6	Foundry Trade: Demonstration and practice on Moulding tools and processes, Preparation of Green Sand Moulds for given Patterns.
7	Welding Shop: Demonstration and practice on GTAW. Preparation of Lap joint and Butt joint.
8	Plumbing: Demonstration and Practice of Plumbing tools, Preparation of Pipe joints with coupling for same diameter and with reducer for different diameters.
9	Assembly and dis assembly of Two-wheeler vehicle
10	Tinkering Lab experiments: a) Build and demonstrate automatic streetlight using LDR. b) Simulate the AURDINO LED blinking activity in Tinker cad c) Interface a basic sensor and actuator with a microcontroller

NSS, SPORTS & YOGA

(Common to AIDS, CIC, CIVIL, CSBS, CSD, ECE, EEE)

Course Objectives:

1.	The objective of introducing this course is to impart discipline, character, fraternity, teamwork, social consciousness among the students and engaging them in selfless service.
2.	To make the students maintain their mental and physical wellness by balancing emotions in their life. It mainly enhances the essential traits required for the development of the personality.

Course Outcomes

S.No	Outcome	Knowledge Level
1.	Understand the importance of discipline, character and service motto.	K2
2.	Explore human relationships by analyzing social problems.	K3
3.	Develop leadership skills and civic responsibilities.	K3
4.	Understand the importance of yoga and sports for physical fitness and sound health	K2
5.	Demonstrate health related fitness components.	K2

SYLLABUS

UNIT-I (10Hrs)	**Orientation** : General Orientation on NSS/NCC/ Scouts & Guides/Community Service activities, career guidance. **Activities:** i Conducting –ice breaking sessions-expectations from the course-knowing personal talents and skills ii Conducting orientations programs for the students –future plans-activities-releasing road map etc. iii Displaying success stories-motivational biopics- award winning movies on societal issues etc. iv Conducting talent show in singing patriotic songs-paintings- any other contribution.
UNIT-II (10 Hrs)	**Nature & Care** **Activities:** i Best out of waste competition. ii Poster and signs making competition to spread environmental awareness. iii Recycling and environmental pollution article writing competition. iv Organising Zero-waste day. v Digital Environmental awareness activity via various social media platforms. vi Virtual demonstration of different eco-friendly approaches for sustainable living. vii Write a summary on any book related to environmental issues.

UNIT-III (10 Hrs)	**Community Service** **Activities:** i Conducting One Day Special Camp in a village contacting village-area leaders- Survey in the village, identification of problems- helping them to solve via media-authorities-experts-etc. i Conducting awareness programs on Health-related issues such as General Health, Mental health, Spiritual Health, HIV/AIDS, ii Conducting consumer Awareness. Explaining various legal provisions etc. iii Women Empowerment Programmes- Sexual Abuse, Adolescent Health and Population Education. iv Any other programmes in collaboration with local charities, NGOs etc.
UNIT-IV (10 Hrs)	Yoga Activities: Yoga practices- Asana, Surya Namaskar, Meditation.
UNIT-V (10 Hrs)	Physical Activities: Practicing general and specific warm up, Aerobics. Cardio respiratory fitness, Skipping and Running. Practice one major game and one individual sport(volley ball, basket ball).

DIFFERENTIAL EQUATIONS AND VECTOR CALCULUS

(Common for all Branches)

Course Objectives: Students are expected to learn

1.	First order ordinary differential equations and some simple geometrical and physical applications.
2.	Methods of solution of linear higher order ordinary differential equations.
3.	Formation and solution of linear partial differential equations.
4.	Concepts of Gradient, divergence, curl.
5.	Vector integral theorems.

Course Outcomes: After completion of the course, the student will be able to

S.No	Outcome	Knowledge Level
1.	**Apply** the knowledge in simple applications such as Newton's law of cooling, orthogonal trajectories and simple electrical circuits.	K3
2.	**Solve** linear ordinary differential equations of second and higher order which occur in various engineering fields.	K3
3.	**Apply** the appropriate methods of solution for partial differential equations that model physical processes.	K3
4.	**Compute** the gradient of a scalar field, curl and divergence of various vector fields to demonstrate their physical behavior.	K3
5.	**Calculate** the work done against a field, circulation and flux using vector calculus.	K3

SYLLABUS

UNIT-I (10Hrs)	**Differential equations of first order and first degree** Exact equations and equations reducible to exact form (Integrating Factor), Linear differential equations, Bernoulli's equations. Orthogonal Trajectories, Applications: Newton's Law of cooling, Law of natural growth and decay, Electrical circuits: RL & RC circuits.
UNIT-II (10 Hrs)	**Linear differential equations of higher order (Constant Coefficients)** Definitions, homogenous and non-homogenous, complimentary function, particular integral, general solution, Method of variation of parameters – Wronskian. Simultaneous linear equations, Applications to L-C-R Circuit problems and Simple Harmonic motion.
UNIT-III (10 Hrs)	**Partial Differential Equations** Introduction and formation of Partial Differential Equations by elimination of arbitrary constants and arbitrary functions, solutions of first order linear equations using Lagrange's method. Homogeneous and Non-Homogeneous Linear Partial differential equations with

	constant coefficients.
UNIT-IV (10 Hrs)	**Vector Differentiation** Scalar and vector point functions, vector operator Del, Gradient and applications, Directional derivative, Divergence – Solenoidal and Curl – Irrotational Field – Scalar Potential, Vectoridentities.
UNIT-V (10 Hrs)	**Vector Integration** Line Integral – Circulation – Work done by force, surface integral – flux, Green's theorem in the plane (without proof), Stoke's theorem (without proof), volume integral, Divergence theorem (without proof) and their applications.

CHEMISTRY FOR CIVIL ENGINEERS

(For CE)

Course Objectives:

1.	To introduce the fundamental principles of chemistry relevant to water, soil, cement, concrete, metals, polymers, composites, and construction materials.
2.	To understand the chemical processes and reactions governing water and soil properties, cement hydration, concrete behaviour, electrochemistry, and corrosion of civil engineering materials.
3.	To understand the chemistry, properties, and applications of civil engineering materials, including steel, polymers, composite materials, and fibre-reinforced polymers.
4.	To develop knowledge of corrosion mechanisms and protection techniques for reinforced concrete, structural steel, and other metallic components used in civil engineering infrastructure.
5.	To introduce green chemistry and sustainable construction materials including industrial waste utilization, low-carbon concrete, geopolymer concrete, and recycling of construction and plastic waste.

Course Outcomes: At the end of the course, the student will be able to

S. No	Outcome	Knowledge Level
1.	Apply basic chemical principles to characterize and evaluate water and soil properties relevant to civil engineering, including hardness, pH, electrical conductivity, cation exchange capacity, and soil–water interactions.	K2, K3
2.	Explain the chemistry of cement and concrete, including cement composition, Bogue compounds, hydration, setting and hardening, alkali–aggregate reactions, water–cement ratio, and the role of chemical admixtures.	K2, K3
3.	Analyze electrochemical processes and corrosion mechanisms and relate them to the deterioration of reinforcing steel, structural steel, and civil infrastructure, including carbonation- and chloride-induced corrosion.	K2, K3
4.	Explain the chemistry, properties, and engineering applications of polymers, elastomers, and composite materials, including FRP systems for structural strengthening and reinforcement replacement.	K2, K3
5.	Apply principles of green chemistry and sustainable construction materials, including industrial waste utilization, construction and demolition waste recycling, plastic roads, low-carbon concrete, and geopolymer concrete.	K2, K3

SYLLABUS

UNIT-I (10 Hrs)	**Water and soil chemistry** Water chemistry: Physico-chemical characteristics of water, Hardness of water (temporary and permanent), Estimation of hardness by EDTA method, Desalination process (Electrodialysis, reverse osmosis), Specifications for drinking water [Bureau of Indian

	Standards (BIS) and World health organization (WHO) standards. Soil chemistry: Chemical properties of soil (pH, cation exchange capacity, and electrical conductivity), Structure of clay minerals, Characteristics of expansive soils, Adsorbed water, Capillary water, Gravitational water, Interaction between clay particles and water.
UNIT-II (10 Hrs)	**Chemistry of cement and concrete** Chemistry of cement: Portland cement composition (major oxides in cement and bogue compounds), Gypsum, Hydration mechanism and its products (calcium silicate hydrate, calcium hydroxide, and ettringite), Setting and hardening, Special types of cement (high-alumina cement, high-early-strength cement, silicate cement, Sorel cement). Chemistry of concrete: Role of aggregates, Alkali–aggregate reactions, Sulphate attack on concrete, water–cement ratio, workability. Chemical admixtures: Plasticizers, retarders, accelerators, air-entraining agents; chemistry of lime, gypsum and clay materials.
UNIT-III (10 Hrs)	**Electrochemistry and Corrosion** Corrosion: Oxidation and reduction, Chemical corrosion and Pilling–Bedworth rule; electrochemical corrosion; concentration-cell corrosion; pitting, galvanic and stress corrosion, Galvanic series, Steel composition and applications, alloying elements, corrosion of steel, carbonation-induced corrosion, chloride-Induced corrosion, Factors affecting the rate of corrosion, Concrete-related factors affecting reinforcement corrosion. Corrosion-prevention methods: Materials-based protection (corrosion-resistant alloys, galvanized reinforcement, and epoxy-coated reinforcement), Cathodic protection (sacrificial anode and impressed-current), anodic protection, protective coatings (paint systems, metallic coatings, sealers, surface treatments, membranes); corrosion inhibitors.
UNIT-IV (10 Hrs)	**Engineering polymers and composite materials** Polymer chemistry: Definition of polymers and monomers, molecular structure of polymers, molecular weight and degree of polymerization, polymerization mechanisms (addition, condensation); classification (thermoplastics, thermosets), engineering polymers: HDPE, PVC, polypropylene, epoxy resins, polyurethane, and their construction applications (geotextile, geogrid, geomembrane, geocell). Composite materials: Matrix and reinforcement; types (polymer-matrix, metal-matrix, ceramic-matrix composites). Fibre-reinforced polymers (FRP): Glass fiber, carbon fiber, aramid fiber; applications in structural strengthening and rebar replacement.
UNIT-V (10 Hrs)	**Green chemistry and sustainable construction materials** Principles of green chemistry and their applications in construction; Carbon capture in cement industry (definition, advantages, challenges); Pozzolanic materials and its reaction, Industrial wastes such as fly ash, GGBS, Steel slag utilization (chemical composition,

	benefits, and applications), Construction and demolition waste recycling (composition, benefits, and applications), Plastic waste in roads (definition, types of plastics used, process, advantages, limitations), Low-carbon concrete (definition, advantages, and challenges), geopolymer concrete (alkali activators, precursors, polymerization reactions, advantages, and challenges).

Computational Thinking and Problem Solving Using Python

(Common for CE & ME)

Course Objectives:

1	Establish computational thinking, decomposition, pattern recognition, abstraction, and algorithmic reasoning as the foundation for problem-solving, with strong grounding in algorithm design and flowchart construction.
2	Develop proficiency in Python control structures while explicitly linking conditionals to abstraction and loops to pattern recognition.
3	Build competence in selecting Python data structures (strings, lists, tuples, dictionaries) as an exercise in abstraction and pattern-based organization of information.
4	Train students to decompose problems into functions and recursive sub-problems, reason informally about algorithmic efficiency, and use AI coding assistants responsibly.
5	Equip students with file handling, exception handling, and basic data analysis/visualization skills framed as decomposing a larger data workflow into manageable, robust steps and to integrate these skills in a capstone mini-project.

Course Outcomes: At the end of the course, student will be able to

S.No	Out comes	Knowledge Level
1	Explain the principles of computational thinking and interpret algorithms and flowcharts that represent problem-solving logic	K2
2	Apply pattern recognition and abstraction, via Python control structures, to implement step-by-step algorithmic solutions	K3
3	Analyze problems to select and manipulate appropriate data structures (strings, lists, tuples, dictionaries) as an abstraction and organization exercise	K4
4	Examine the correctness and efficiency of decomposed, modular algorithms and Python programs through tracing, testing, debugging, and exception handling	K4
5	Analyze modular, well-structured Python programs by decomposing problems into functions, recursion, file handling, and data analysis, culminating in an integrative capstone project	K4

UNIT-I (10 Hrs)	Computational Thinking, Algorithm Design & Flowcharting Computational thinking pillars - decomposition, pattern recognition, abstraction, algorithmic thinking, and the problem-solving process. Algorithm design - characteristics of a good algorithm, stepwise refinement, pseudocode. Flowcharts - standard symbols, construction rules, and manual tracing for verification. Translating algorithms and flowcharts into Python code - variables, data types,

	operators, and input/output. Introduction to good coding practice - docstrings, inline comments, and print-based debugging, threaded through every unit from here on
UNIT – 2 (10 Hrs)	Control Structures, Conditional statements - as abstraction over multiple cases. Loops (for, while) - as pattern recognition of repetition. Nested loops and loop control (break, continue, pass) - as decomposition of complex repetitive logic.
UNIT – 3 (10 Hrs)	Data Structures — Strings, Lists, Tuples &Dictionaries Strings - pattern matching and abstraction of text as a sequence.Lists - abstraction of ordered, mutable collections.Tuples and dictionaries - abstraction of fixed and key-based data
UNIT – 4 (10 Hrs)	Functions & Modular ProgrammingFunctions - decomposition of a program into independent, reusable sub-problems. Recursion - algorithmic thinking applied to self-similar sub-problems.Basic algorithmic efficiency - informal comparison of iterative vs. recursive approaches and their time trade-offs. Modules and built-in libraries, including responsible AI-assisted coding practices.
UNIT – 5 (10 Hrs)	File Handling, Exception Handling, Data Analysis & Capstone Project File handling - decomposition of a data workflow into read/process/write stages. Exception handling - abstraction of error cases into predictable, manageable patterns. Introduction to data analysis and visualization (NumPy/Pandas/Matplotlib basics) - pattern recognition in real datasets. Capstone integration - combining all prior units into one end-to-end project.

ENGINEERING GEOLOGY

(For CE)

Course Objectives: The course is designed

1.	To introduce basic geological processes and their relevance to civil engineering.
2.	To familiarize students with common minerals, rocks, and their identification.
3.	To impart knowledge of geological structures and their engineering significance.
4.	To understand groundwater conditions, geophysical methods, earthquakes, and landslides.
5.	To familiarize students with geological considerations in dams, reservoirs, and tunnels.

Course Outcomes: After successful completion of this course, the student will be able to:

S.No	Outcome	Knowledge Level
1.	**Explain** weathering and geological processes relevant to civil engineering.	K2
2.	**Identify** and classify common minerals and rocks.	K2
3.	**Interpret** geological structures and their engineering significance.	K3
4.	**Apply** geological and geophysical principles to engineering problems.	K3
5.	**Analyze** geological conditions for dams, reservoirs, and tunnels.	K4

SYLLABUS

UNIT-I (08Hrs)	**Introduction:** Branches of Geology, Importance of Geology in Civil Engineering with case studies, Weathering of rocks, Geological agents, weathering process of Rock, Rivers and geological work of rivers.
UNIT-II (10 Hrs)	**Mineralogy and Petrology:** Definitions of Mineral and Rock-Different methods of study of minerals and rocks. Physical properties of minerals and rocks for megascopic study. Common rock forming minerals: Feldspar, Quartz Group, Olivine, Augite, Hornblende, Mica Group, Asbestos, Talc, Chlorite, Kyanite, Garnet, Calcite. Ore forming minerals: Pyrite, Hematite, Magnetite, Galena, Pyrolusite, Graphite, Chromite, Magnetite and Bauxite. Classification, structures, textures and forms of Igneous rocks, Sedimentary rocks, Metamorphic rocks. Megascopic study of granite varieties, (pink, gray, green). Pegmatite, Dolerite, Basalt etc., Shale, Sand Stone, Lime Stone, Laterite, Quartzite, Gneiss, Schist, Marble, Khondalite and Slate. Engineering properties of rocks.
UNIT-III (08 Hrs)	**Structural Geology:** Strike, Dip and Outcrop. Study of common geological structures associating with the rocks such as Folds, Faults, Joints and Unconformities - types, mechanism and their importance in Civil Engineering.
UNIT-IV	**Ground Water:** Water table, Cone of depression, Geological controls of Ground Water

(12 Hrs)	Movement, Ground Water Exploration Techniques. **Earthquakes:** Terminology, Classification, causes and effects, Shield areas and Seismic belts, Richter scale. Precautions of building constructions in seismic areas. **Land Slides:** Classification of Landslides, Causes and Effects, Preventive and Remedial measures for Landslides. **Geophysics:** Importance of Geophysical methods, Classification, Principles of Geophysical study by Gravity method, Magnetic method, Electrical methods, Seismic methods, Radiometric method. Electrical resistivity, Seismic refraction methods.
UNIT-V (08 Hrs)	**Geology of Dams, Reservoirs and Tunnels**: Types and purpose of Dams, Geological considerations in the selection of a Dam site. Geology consideration for successful constructions of reservoirs, Life of Reservoirs. Purpose of Tunneling, Lining of Tunnels. Influence of Geology for successful Tunneling.

ENGINEERING GRAPHICS

(Common to CE, EEE & ME)

Course Objectives:

1	Develop spatial visualization and graphical communication skills to represent three-dimensional engineering objects using standard engineering graphics principles.
2	Create 2D, 3D CAD models and communicate engineering design information effectively through conventional drawings and digital CAD tools.

Course Outcomes:

S.No	Outcome	Knowledge Level
1	**Apply** standard engineering graphics principles and conventions to prepare accurate sketches and engineering drawings.	**K3**
2	**Visualize** and represent three-dimensional objects and systems using appropriate projection, orthographic, isometric, sectional, and surface-development techniques.	**K4**
3	Use CAD tools to **Create**, modify, and **Communicate** 2D drawings and 3D models with appropriate dimensions, annotations, symbols, and features.	**K4**
4	**Generate** complete engineering design documentation through original graphical representations, detailed CAD models, and compliant engineering drawings for multidisciplinary applications.	**K4**

SYLLABUS

Section A – Manual Engineering Drawing

1. **Geometrical Constructions and Engineering Curves:**
   Introduction to Engineering Drawing, Lines, Lettering and Dimensioning, Geometrical Constructions and Constructing regular polygons by general methods.
2. **Engineering Curves**: Parabola, Ellipse and Hyperbola by general method (Eccentricity method only), Cycloidal curves, Involutes, tangent & normal for these curves.
3. **Projection of Points and Straight Lines:** Projection of points in different quadrants and straight lines in different orientations.
4. **Projections of planes:** projections of regular planes perpendicular to one reference plane and parallel or inclined to the other, Planes inclined to both reference planes.
5. **Projections of Solids**: Types of solids- Polyhedra and Solids of revolution. Projections of solids in simple positions.
6. **Sections of Solids**: Sections and Sectional views of Right and Regular Solids.
7. **Isometric Projection:** Introduction to Isometric projection and Isometric projection of simple Right and Regular Solids – Prism, Cylinder, Pyramid and Cone.

Section B –Computer Aided Engineering Graphics

1. **Computer-Aided Engineering Graphics (CAD)** Introduction to CAD software, standard tool bar menu and description of most commonly used tool bars, and navigational tools.
2. **CAD Geometrical Constructions and Curves**: Construction of polygons, circles, arcs, ellipse and other engineering curves using CAD.
3. **2D CAD – Orthographic Views**: Preparation of front, top, side views of simple engineering objects
4. **Basic 3D CAD Modelling:** Creation of simple three-dimensional engineering objects using basic modelling features.
5. **3D CAD Modelling with Features:** Creation and modification of 3D models using features such as hole, fillet, chamfer, mirror, pattern and other appropriate tools
6. **Construct a 3D CAD model** of a given engineering object from its front, top and side orthographic views.
7. **CAD Sectional Views:** Creation of sectional views of 3D engineering objects and generation of corresponding 2D drawings.
8. **CAD Surface Development**: Development of cylindrical, conical, prismatic surfaces using CAD.
9. **3D Model to Engineering Drawing:** Generation of orthographic, isometric and sectional views with dimensions, annotations and symbols from a 3D CAD model.
10. **CAD Modelling of Physical Engineering Objects:** Measurement and interpretation of a physical engineering object, recreation of its geometry in CAD, and preparation of its engineering drawing.

Foundations of Quantum Technologies

(For Branch)

Course Objectives: The course aims to:

1.	Introduce the foundations of classical mechanics and the historical developments that led to the quantum hypothesis and wave–particle duality.
2.	Provide a foundation in the mathematical formalism and postulates of quantum mechanics, including its representation of states, physical observables, and time evolution.
3.	Develop an understanding of fundamental quantum phenomena and their applications to physical systems.
4.	Develop an understanding of thermodynamic principles and the Gibbs approach to the thermal behaviour of classical and quantum harmonic oscillators.
5.	Introduce the fundamentals of quantum information and its connections to information theory, computation, and cryptography.

Course Outcomes: After successful completion of the course, student will be able to:

S.No	Outcome	Knowledge Level
1.	Apply Hamiltonian formulations and Hamilton's equations to determine the equations of motion for simple physical systems.	K3
2.	Illustrate the mathematical framework of quantum states, Dirac bra-ket notations, and Hermitian operators using the postulates of quantum mechanics.	K2
3.	Utilize quantum postulates and ladder operators to solve for states and physical observables in harmonic oscillators and spin-half systems.	K3
4.	Apply the Gibbs principle and thermodynamic laws to evaluate the thermal behavior of classical and quantum harmonic oscillators.	K3
5.	Describe the fundamental principles of quantum information science, including Shannon entropy, decoherence, computational complexity, and the purpose of post-quantum cryptography.	K2

SYLLABUS

UNIT-I (10Hrs)	Hamiltonian function and Hamilton's equations, Connection and Equivalence with Newton's laws for simple systems – free particle, particle moving in a conservative potential, examples of Harmonic oscillator, hydrogen atom. Historical evolution of quantum mechanics: Planck's quantum hypothesis, Photo electric effect, Atomic spectra, Bohr's quantisation principle, De Broglie's Wave particle duality.
UNIT-II (10 Hrs)	Postulates of Quantum Mechanics: State vectors and Hilbert Space, Dirac Bra-Ket notation, Measurables and Hermitian Operators, Unitary Transformations, Schrodinger Equation and Time evolution of quantum states, Measurement Postulate, Eigen values, Expectation

	values and Matrix elements, Heisenberg's Uncertainty principle.
UNIT-III (10 Hrs)	Superposition and Entanglement in quantum mechanics; No cloning theorem; Applications of postulates –Particle in a box, Hydrogen atom, Harmonic Oscillator. Number states, ladder operators and Coherent states of a harmonic oscillator; Spin and Angular momentum spin half particles;
UNIT-IV (10 Hrs)	Statistical Physics: Quick review of first and second laws of thermodynamics, Thermal Equilibrium and Gibbs principle, Applying Gibbs principle to Classical and Quantum harmonic oscillators.
UNIT-V (10 Hrs)	Information Science: Digital communication and information: Quantifying information in terms of Shannon entropy; Basic ideas of quantum information; Decoherence and noise. Brief overview of Computational Complexity: Qualitative ideas of a Turing machine: Types of Turing machines; Time and Space complexity – P vs NP, PSPACE; Post Quantum Cryptography (PQC).

ENGINEERING GEOLOGY LABORATORY

(For CE)

Course Objectives:

1.	To familiarize students with the identification of common minerals.
2.	To develop skills in the identification and description of common rocks.
3.	To introduce basic structural geology problems and their interpretation.
4.	To familiarize students with geomorphological and engineering models.
5.	To develop field skills in geological identification and observation.

Course Outcomes: After successful completion of this course, the student will be able to:

S.No	Outcome	Knowledge Level
1.	**Utilize** mineralogical principles to identify common rock-forming and ore-forming minerals.	K3
2.	**Employ** geological criteria to identify and classify common igneous, sedimentary, and metamorphic rocks.	K3
3.	**Execute** structural geology principles to solve basic problems related to geological structures.	K3
4.	**Implement** geomorphological and engineering geological principles to analyze river, dam, and tunnel models.	K3
5.	**Demonstrate** appropriate field techniques to identify minerals, rocks, and geological features.	K3

SYLLABUS

1.	Physical properties of minerals: Mega-scopic identification of a) Rock forming minerals – Quartz group, Feldspar group, Garnet group, Mica group & Talc, Chlorite, Olivine, Kyanite, Asbestos, Tourmelene, Calcite, Gypsum, etc. b) Ore forming minerals – Magnetite, Hematite, Pyrite, Pyralusite, Graphite, Chromite, etc.
2.	Megascopic description and identification of rocks. a) Igneous rocks – Types of Granite, Pegmatite, Gabbro, Dolerite, Syenite, Granite Poryphery, Basalt, etc. b) Sedimentary rocks – Sand stone, Ferrugineous sand stone, Lime stone, Shale, Laterite, Conglamorate, etc. c) Metamorphic rocks – Biotite – Granite Gneiss, Slate, Muscovite &Biotiteschist, Marble, Khondalite, etc.
3	Simple Structural Geology problems.
4.	Geomorphology models of River and Engineering Models of Dams and Tunnels.
5.	Field work – To identify Minerals, Rocks, Geomorphology& Structural Geology.

LAB EXAMINATION PATTERN:	
1.	Description and identification of FOUR minerals
2.	Description and identification of FOUR (including igneous, sedimentary and metamorphic rocks)
3.	TWO Questions on Simple strike and Dip problems.
4.	Two Questions on Geomorphology and Engineering models.
5.	Project report on geology.

Computational Thinking and Problem Solving Using Python Lab

(Common to CE & ME)

Course Objectives: At the end of the course, the teacher should be able to

1	Establish computational thinking, decomposition, pattern recognition, abstraction, and algorithmic reasoning as the foundation for problem-solving, with strong grounding in algorithm design and flowchart construction.
2	Develop proficiency in Python control structures while explicitly linking conditionals to abstraction and loops to pattern recognition.
3	Build competence in selecting Python data structures (strings, lists, tuples, dictionaries) as an exercise in abstraction and pattern-based organization of information.
4	Train students to decompose problems into functions and recursive sub-problems, reason informally about algorithmic efficiency, and use AI coding assistants responsibly.
5	Equip students with file handling, exception handling, and basic data analysis/visualization skills framed as decomposing a larger data workflow into manageable, robust steps and to integrate these skills in a capstone mini-project.

Course Outcomes: At the end of the course, student will be able to

S.No	Out comes	Knowledge Level
1	Explain the principles of computational thinking and interpret algorithms and flowcharts that represent problem-solving logic	K2
2	Apply pattern recognition and abstraction, via Python control structures, to implement step-by-step algorithmic solutions	K3
3	Analyze problems to select and manipulate appropriate data structures (strings, lists, tuples, dictionaries) as an abstraction and organization exercise	K4
4	Evaluate the correctness and efficiency of decomposed, modular algorithms and Python programs through tracing, testing, debugging, and exception handling	K5
5	Create modular, well-structured Python programs by decomposing problems into functions, recursion, file handling, and data analysis, culminating in an integrative capstone project	K6

1	**Week 1 (Unit 1):** 1. Find the largest of three numbers. 2. Check whether a given year is a leap year
2	**Week 2 (Unit 1):** (1) Compute simple interest given principal, rate, and time. (2) Compute the area and perimeter of a rectangle from user input.

	(3) Swap two numbers without using a third variable.
3	**Week 3 (Unit 2):** (1) Determine whether a number is positive, negative, or zero. (2) Check if a given number is prime (3) Convert temperature between Celsius and Fahrenheit based on user choice (4) Determine BMI category (underweight/normal/overweight/obese) using elif. (5) Classify a triangle as equilateral, isosceles, or scalene.
4	**Week 4 (Unit 2):** (1) Print all Armstrong numbers between 1 and 1000. (2) Generate the Fibonacci series up to n terms using a loop (3) Find the GCD and LCM of two numbers using a while loop (4) Simulate a simple ATM PIN-entry system allowing a maximum of 3 attempts. Find the first n prime numbers using nested loops with break
5	**Week 5 (Unit 3):** (1) Encrypt a message using a Caesar cipher. (2) Check if two given strings are anagrams of each other. (3) Check whether a given string is a palindrome using slicing and string methods (4) Count vowels, consonants, digits, and spaces in a given string
6	**Week 6 (Unit 3):** (1) Find the second-largest element in a list of exam scores. (2) Merge two sorted lists of student roll numbers into a single sorted list. (3) Generate squares of all even numbers from 1 to 50 using list comprehension. (4) Store and retrieve student records using a dictionary (roll number as key, tuple of name/marks as value
7	**Week 7 (Unit 3):** (1) Store coordinates (x, y) as tuples in a list and compute the distance between consecutive points. (2) Count the frequency of each word in a paragraph using a dictionary (3) Maintain an inventory system (item name as key, tuple of price and quantity as value) that updates stock after each transaction.
8	**Week 8 (Unit 4):** (1) Using a function, check if a number is "perfect," and list all perfect numbers up to 10,000. (2) Using *args, compute the total resistance of resistors in series or parallel. (3) Define a function with default/keyword arguments to compute the area of different shapes based on shape type and use it. (4) Write a function that returns the mean, median, and mode of a list of number
9	**Week 9 (Unit 4):** (1) Compute the GCD of two numbers recursively using the Euclidean algorithm. (2) Compute factorial using recursion (3) Solve the Tower of Hanoi problem for n disks recursively and count the number of moves. (4) Compute the range and maximum height of a projectile given initial velocity and angle, using the math module
10	**Week 10 (Unit 5):** (1) Count the words, lines, and characters in a given text file. (2) Read a log file of sensor readings and append a new set of readings with a timestamp.

	(3) Read a text file of daily temperature readings and write the maximum, minimum, and average to an output file
11	**Week 11 (Unit 5):** (1) Build a simple calculator that gracefully handles ZeroDivisionError, ValueError, and invalid operators. (2) Safely compute the roots of a quadratic equation using try-except-finally, abstracting invalid input and division-by-zero into predictable, handled error patterns. (3) Read a CSV of student marks and write the names of students scoring above 75% to a new file (4) Validate user input for a unit-conversion tool and raise a custom exception for out-of-range values. (5) Using Pandas, read a CSV of daily electricity consumption and plot a line graph over a month, recognizing weekday/weekend consumption patterns
12	**Week 12 (Unit 5):** (1) Capstone Mini-Project: "Dataset Health-Check & Insights Tool" — decompose the workflow into read → validate → clean → analyze → visualize → report stages, using exception handling and NumPy/Pandas/Matplotlib, submitted with a one-page reflection.

CHEMISTRY FOR CIVIL ENGINEERS LAB

(For CE)

Course Objectives: Student shall be able to

1	To determine important physicochemical properties of water such as hardness, acidity, alkalinity, chlorides, dissolved oxygen, pH, and total dissolved solids using standard laboratory methods.
2	To evaluate the chemical properties of soil including pH and cation exchange capacity and understand their significance in civil and environmental engineering applications.
3	To characterize cement and supplementary cementitious materials by determining fineness, setting time, specific gravity, and selected chemical constituents.
4	To investigate electrochemical behaviour and corrosion of metals and cementitious materials using conventional and instrumental laboratory techniques.
5	To develop practical skills in chemical analysis, experimental measurements, data interpretation, and evaluation of construction materials and environmental samples.

Course Outcomes: At the end of the course, the student will be able to

S. No	Outcome	Knowledge Level
1	Determine the physicochemical characteristics of water and soil samples using standard chemical and instrumental methods.	K3
2	Analyze the chemical properties of cement and supplementary cementitious materials through laboratory testing and interpret their suitability for construction applications.	K4
3	Analyze corrosion behaviour of metals using weight-loss, electrical resistance, and electrochemical measurement techniques.	K4
4	Determine and interpret cation exchange capacity, pH, dissolved solids, hardness, and other chemical parameters relevant to civil engineering materials and environmental systems.	K4
5	Analyze experimental results to assess the quality, performance, durability, and suitability of water, soil, cement, and construction materials for civil engineering applications.	K4

LIST OF EXPERIMENTS

1	Determination of Hardness of Water
2	Conductometric titration of a strong acid against a strong base.
3	Determination of Alkalinity
4	Estimation of Chlorides
5	Determination of Dissolved Oxygen (DO)
6	Determination of water and soil samples using a pH meter.
7	Determination of the fineness of cement by sieve analysis.

8	Determination of the setting time (initial and final) of cement using a Vicat apparatus.
9	Determination of specific gravity of cement and fly ash.
10	Determination of corrosion rate of mild steel by weight-loss method.
11	Determination of CaO and MgO using EDTA titration.
12	Determination of Cation Exchange Capacity (CEC) of soil.
13	Determination of weak acid against a strong base by using potentiometer.
14	Determination of Impedance of cement paste using LCR meter
15	Estimation of corrosion of iron using change in electrical resistance through LCR meter
	*At least 10 experiments must be done

English for Technical Communication and MOODLE Laboratory

(Common AIDS, AIML, CIC, CE, CSBS, CSD, CSE, CSIT, ECE, EEE, IT.)

Course Objectives:

1	Enable students apply correct phonological patterns for effective communication.
2	Develop students' ability to employ listening strategies to comprehend audio texts.
3	Enable students participate effectively in group discussions, presentations, debates, and interviews in professional contexts.
4	Enhance students' ability to write cohesively and coherently.
5	Familiarize students with Moodle LMS and digital learning tools for effective use of learning resources

Course Outcomes:

Sl. No	Outcome	Knowledge Level
1	Apply appropriate phonological features to communicate effectively in formal and informal contexts.	K3
2	Apply listening strategies to comprehend audio texts, take notes, and narrate events.	K3
3	Demonstrate effective participation in group discussions, presentations, debates, and interviews to communicate in professional contexts.	K3
4	Develop an ability to write clearly on topics related to technology and workplace communication.	K3
5	Demonstrate proficiency in using Moodle LMS and digital learning tools to access learning resources effectively.	K2

SYLLABUS

PART-A

1	Phonetics & Accent Neutralization
2	Introducing Self and Others
3	Brief Talk in Formal/Informal Contexts, JAM/Extempore
4	Listening Comprehension
5	Audio-based Note Taking & Narrating Events
6	Process Description and Paragraph Writing (Technical Lab Context)
7	Group Discussions and Deliberations
8	Micro Presentations (2-5 Mts)
9	Presenting Logical Arguments – Debates
10	Interviews – Formal & Semi-formal

PART-B Moodle Learning Management System: Digital Learning and Academic Skills	
1	Introduction to Moodle LMS • Introduction to Moodle • Student login and profile management • Moodle dashboard and course navigation • Accessing announcements and course materials • Notifications and calendars
2	Learning Through Moodle • Accessing PDFs, videos, web resources, and lecture materials • Downloading and organizing study materials • Moodle lessons and learning activities • Tracking course completion • Managing deadlines and study schedules
3	Assignments, Quizzes and Assessments • Understanding assignment instructions • Creating and uploading assignments • File formats and file naming • Online quizzes and question types • Viewing marks and teacher feedback • Resubmission and revision
4	Digital Communication and Collaboration • Moodle forums and discussions • Academic email etiquette • Online communication and netiquette • Group activities and peer learning • Collaborative learning tools • Digital presentation skills
