| 5. | a). | Describe foreign key constraint and unique constraint with suitable examples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 2 | 2 | 5 |
|    | b). | <p>Consider the following relational database:<br/> Emp(<u>ename</u>,street,city) , Works(<u>ename</u>,company-name,salary),<br/> company(<u>company-name</u>,city),manages( <u>ename</u>,manager-name)<br/> Use relational algebra operators to answer the following.</p> <p>i) Find the names and cities of all employees who work for First Bank Corporation</p> <p>ii) Find names, street, and cities of all employees who work for First Bank Corporation and earn more than 10,000</p> <p>iii) Find all employees in the database who earn more than every employee of Small Bank Corporation</p> | 2 | 3 | 5 |
|    |     | <b>UNIT-3</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |   |   |
| 6. | a). | What is the difference between a nested query and a correlated query?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 3 | 2 | 4 |
|    | b). | <p>Consider the following database: Students (S_ID, Dept, CGPA)<br/> Courses(C_ID, Offered_By_Dept, Credits) Enrolled (S_ID, C_ID, Grade)<br/> Apply SQL concepts to answer the following queries.</p> <p>i) Find the best CGPA in each department.</p> <p>ii) Find the IDs of students who enrolled for some course offered by other department. Display student dept and course offering department along with S_ID.</p> <p>iii) Find the IDs of students who got at least two “A” grades.</p>                                                                                                        | 3 | 3 | 6 |
|    |     | <b>OR</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |   |   |
| 7. | a). | Explain various types of joins in SQL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 3 | 2 | 5 |
|    | b). | Explain the use of <i>group by</i> and <i>having</i> clauses with an example.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 3 | 2 | 5 |
|    |     | <b>UNIT-4</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |   |   |   |
| 8. | a). | Define lossless join decomposition. Suppose that we decompose the schema R(A,B,C,D,E) into R1(A,B,C) and R2(A,D,E). <b>Determine</b> whether this decomposition is a lossless decomposition under the following functional dependencies: F={A→BC,BD→E,B→D,E→A}                                                                                                                                                                                                                                                                                                                                          | 4 | 3 | 5 |
|    | b). | Determine that a relation in BCNF is also in 3NF and not vice-versa with a suitable example.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 4 | 3 | 5 |
|    |     | <b>OR</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |   |   |

|     |     |                                                                                                                   |   |   |   |
|-----|-----|-------------------------------------------------------------------------------------------------------------------|---|---|---|
| 9.  | a). | Explain Fourth Normal form with an example                                                                        | 4 | 2 | 5 |
|     | b). | Let R (ABCDE) F={A→B, BC→D, D→E). Find all candidate keys of R and also determine the highest normal of R.        | 4 | 3 | 5 |
|     |     |                                                                                                                   |   |   |   |
|     |     | <b>UNIT-5</b>                                                                                                     |   |   |   |
| 10. | a). | Explain ARIES recovery algorithm.                                                                                 | 5 | 2 | 5 |
|     | b). | Explain Primary Indexing                                                                                          | 6 | 2 | 5 |
|     |     | <b>OR</b>                                                                                                         |   |   |   |
| 11. | a). | Explain 2-Phase Locking Protocol.                                                                                 | 5 | 2 | 5 |
|     | b). | Demonstrate the construction of a B+ tree of order 3 for the following key values :<br>20,15,10,5,8,30,1,40,35,25 | 6 | 2 | 5 |

| Answer <b>ONE Question</b> from <b>EACH UNIT</b> |     |                                                                                                           |                  |    |     |
| Assume suitable data if necessary                |     |                                                                                                           |                  |    |     |
| 10 x 2 = 20 Marks                                |     |                                                                                                           |                  |    |     |
|                                                  |     |                                                                                                           | CO               | KL | M   |
| 1.                                               | a). | What is the purpose of the main method in a Java program?                                                 | 1                | 1  | 2   |
|                                                  | b). | Explain the difference between ++i and i++ in Java.                                                       | 1                | 2  | 2   |
|                                                  | c). | What is the significance of the this keyword in Java?                                                     | 2                | 2  | 2   |
|                                                  | d). | Explain method overloading with an example.                                                               | 2                | 3  | 2   |
|                                                  | e). | How do you declare a two-dimensional array in Java? Provide a code example.                               | 3                | 3  | 2   |
|                                                  | f). | What is the purpose of the super keyword in Java inheritance?                                             | 3                | 2  | 2   |
|                                                  | g). | What is the role of the finally block in exception handling?                                              | 4                | 2  | 2   |
|                                                  | h). | How do you import a class from a package in Java? Provide a code example.                                 | 4                | 3  | 2   |
|                                                  | i). | What is the difference between String and String Buffer in Java?                                          | 5                | 2  | 2   |
|                                                  | j). | Explain the purpose of the synchronized keyword in Java multithreading.                                   | 5                | 2  | 2   |
| 5 x 10 = 50 Marks                                |     |                                                                                                           |                  |    |     |
|                                                  |     | UNIT-1                                                                                                    |                  |    |     |
| 2.                                               | a). | Describe the main principles of Object-Oriented Programming.                                              | 1                | 2  | 5   |
|                                                  | b). | Write a simple Java program to display "Hello, World!" and explain each line of code.                     | 1                | 3  | 5   |
|                                                  |     | OR                                                                                                        |                  |    |     |
| 3.                                               | a). | List and explain the different data types available in Java.                                              | 1                | 2  | 5   |
|                                                  | b). | What is type casting in Java? Write a program to demonstrate implicit and explicit type casting.          | 1                | 3  | 5   |
|                                                  |     | UNIT-2                                                                                                    |                  |    |     |
| 4.                                               | a). | Explain the concept of constructors in Java. How do they differ from regular methods?                     | 2                | 2  | 5   |
|                                                  | b). | Write a Java program to create a class with overloaded constructors. Show how each constructor is called. | 2                | 3  | 5   |

|     |     |                                                                                                                               |   |   |   |
|-----|-----|-------------------------------------------------------------------------------------------------------------------------------|---|---|---|
|     |     | <b>OR</b>                                                                                                                     |   |   |   |
| 5.  | a). | Define method overriding. How is it different from method overloading?                                                        | 2 | 2 | 5 |
|     | b). | Provide an example to demonstrate method overriding in Java.                                                                  | 2 | 3 | 5 |
|     |     |                                                                                                                               |   |   |   |
|     |     | <b>UNIT-3</b>                                                                                                                 |   |   |   |
| 6.  | a). | Describe the process of declaring and initializing a one-dimensional array in Java.                                           | 3 | 3 | 5 |
|     | b). | Write a Java program to find the maximum element in an array of integers.                                                     | 3 | 3 | 5 |
|     |     | <b>OR</b>                                                                                                                     |   |   |   |
| 7.  | a). | Explain the concept of inheritance in Java. What are the different types of inheritance supported by Java?                    | 3 | 2 | 5 |
|     | b). | Write a Java program to demonstrate multilevel inheritance.                                                                   | 3 | 3 | 5 |
|     |     |                                                                                                                               |   |   |   |
|     |     | <b>UNIT-4</b>                                                                                                                 |   |   |   |
| 8.  | a). | What are packages in Java? Why are they used?                                                                                 | 4 | 2 | 5 |
|     | b). | Create a package named com.example and a class named Hello within this package. Write a program to display "Hello, Package!". | 4 | 3 | 5 |
|     |     | <b>OR</b>                                                                                                                     |   |   |   |
| 9.  | a). | Describe the try-catch-finally mechanism in Java exception handling.                                                          | 4 | 2 | 5 |
|     | b). | Write a Java program that demonstrates handling multiple exceptions using multiple catch blocks.                              | 4 | 3 | 5 |
|     |     | <b>UNIT-5</b>                                                                                                                 |   |   |   |
| 10. | a). | Explain the differences between String, StringBuilder, and String Buffer.                                                     | 5 | 2 | 5 |
|     | b). | Write a Java program to reverse a string using StringBuilder.                                                                 | 5 | 3 | 5 |
|     |     | <b>OR</b>                                                                                                                     |   |   |   |
| 11. | a). | What is JDBC? Describe its architecture.                                                                                      | 5 | 2 | 5 |
|     | b). | Write a Java program to establish a connection to a MySQL database and execute a simple query to retrieve data from a table.  | 5 | 3 | 5 |
